

## Client Testimonial

"The Department is very satisfied with the ditching, aggregate placement and compaction efforts inspected by Mr. Robert Kosir (Stahl Sheaffer Engineering). Again, I would like to thank you and the staff for a fine job."

*State Highway Utilities Supervisor*

# Construction Inspection

Stahl Sheaffer Engineering provides construction management and inspection services with individuals who possess a valuable combination of practical field experience and technical understanding. They serve as point of contact for communication between owner and contractor and provide:

- Preparation of contract documents
- Bidding and notification administration
- Pre-construction conferences
- Review of various submissions and shop drawings
- Ensuring adherence to samples, schedules, shop drawings in the field
- Onsite inspection during construction (roadway, building structures)
- Project coordination meetings
- Complete project documentation
- Documentation necessary for special funding (CDBG, TE) reimbursement
- Assisting owner with approval of change orders
- Reviewing pay requests for owner's approval
- Final inspection and completion of punch list items
- Project closeout assistance
- Web-Based construction management portal for daily progress updates

Stahl Sheaffer provides all inspectors with a 'Construction Inspection Checklist' for all operations to ensure that they are constructed in accordance with specifications, project requirements, and special provisions. The inspector will ensure that schedules are updated and reviewed biweekly to ensure there are no delays jeopardizing completion dates, and will perform 'constructability reviews' to evaluate areas of potential time and material savings and to evaluate whether the Contractor is within the original submitted schedule. If our evaluations reveal that schedules are lagging or if additional work is identified, we will notify the contractor and owner immediately and help develop means to restore the project to schedule. Stahl Sheaffer has a proven track record of maintaining all bookwork in a current state, and closing out projects within one month of project completion. Our inspectors maintain current certifications in areas of expertise (NICET, NECEPT, ACI, etc.) and we provide in-house and training to ensure they have current industry knowledge. They also have access to the technical expertise of professional engineers for a variety of transportation and structural projects. Stahl Sheaffer can mobilize experienced inspectors to adequately staff any project.
