Greenbag Road PIE Study

WVDOH, Morgantown, Monongalia County, WV

Stahl Sheaffer completed preliminary engineering and right-of-way plans for the widening and intersection improvements along 1.5 miles of Greenbag Road to support the WVDOH in providing operational improvements to reduce congestion and address the lack of safe non-motorized connects along the corridor. The project involved preliminary roadway design, conceptual traffic control, preliminary drainage design, 3D LiDAR scanning, right-of-way development, public involvement, finalization of a traffic study looking at the intersection flows and overall corridor analysis, and subconsultant coordination for required environmental work needed for construction.
